

Dear Hiring Team,

I am a B.Tech student at NIT Rourkela and currently a Research Intern at IIT Kharagpur, where I work on machine learning models for enzyme kinetics prediction using PyTorch. Through this work, I have gained experience in data preprocessing, statistical analysis, model evaluation, and reproducible machine learning experimentation.

I am excited about the Data Science Intern opportunity at Cresta because it combines machine learning, data analysis, and real-world business impact. My experience includes building and evaluating predictive models, performing exploratory data analysis, working with Python, SQL, Pandas, NumPy, Scikit-learn, and developing end-to-end machine learning projects.

Beyond research, I have contributed to the PyCQA/Pylint open-source project and developed a machine learning library implementing core algorithms from scratch. These experiences have strengthened both my analytical thinking and software engineering skills.

I am particularly interested in Cresta's mission of applying AI to improve customer experiences and would welcome the opportunity to contribute while learning from a world-class team.

Thank you for your consideration.

Sincerely,

Akshay Choudhary
